Abstract

Augmented Human is an autonomous collective of collaborating intellectual systems with Human at its core. Human in core is a unique individual and has exclusive absolute control over the systems' code and the weights of machine learning models.

1. Uniqueness, Human at Core

Augmented Human has a unique Human with his or her own behaviors and preferences at its core and locally running personally tailored artificial intelligence systems with unique sets of weights at the periphery.

2. Synergy, Human - Final Arbiter

Augmented Human has the freedom to make decisions. Human and peripheral intellectual systems work synergistically to empower Human individual cognitive abilities and preferences, while the Human remains the final arbiter.

3. Self-learning, Human guided

Augmented Human is a self-learning entity that constantly evolves as a unified whole, with each component contributing transparently to its evolution, guided by Human-defined priorities.
